

Name : Mr. SUNIL KUMAR
Age/Gender : 40 Years / Male
Ref.By : Self
Req No. : BNG2625527
Sample Type : Serum
Client Name : VMEDO RETAIL-CMLKAD56

Vial ID : 3185546
Collected On : 11-Mar-2026 03:34 PM
Registered On : 11-Mar-2026 03:33 PM
Reported On : 11-Mar-2026 04:47 PM
Client Code : CMLKAD56

Anti Microsomal/Thyroperoxidase Antibody (AMA)

Test Name	Observed Values	Units	Biological Reference Intervals
* ANTI THYROPEROXIDASE ANTIBODIES(ATPO)	0.47	IU/mL	Less than 50 : Negative More than 50 : Positive

Method:ECLIA

INTERPRETATION::

Thyroid peroxidase antibodies (TPO) antibodies can be a sign of Hashimoto disease, also known as Hashimoto thyroiditis. This is an autoimmune disease and the most common cause of hypothyroidism. Hypothyroidism is a condition in which the thyroid doesn't make enough thyroid hormones.

Graves' disease. This is also an autoimmune disease and the most common cause of hyperthyroidism. Hyperthyroidism is a condition in which the thyroid makes too much of certain thyroid hormones.

Thyroid Stimulating Hormone (TSH)			
Test Name	Observed Values	Units	Biological Reference Intervals
* Thyroid Stimulating Hormone.(TSH) Method:CLIA	13.59	μIU/mL	0.35 – 5.1

INTERPRETATION:

Thyroid-stimulating hormone (TSH, thyrotropin) is a glycoprotein having a molecular weight of approximately 30000 daltons and consisting of two subunits. The -subunit carries the TSH-specific immunological and biological information, whereas the -chain carries species-specific information and has an identical amino acid sequence to the -chains of LH, FSH and hCG. The determination of TSH serves as the initial test in thyroid diagnostics.

Even very slight changes in the concentrations of the free thyroid hormones bring about much greater opposite changes in the TSH level. Accordingly, TSH is a very sensitive and specific parameter for assessing thyroid function and is particularly suitable for early detection or exclusion of disorders in the central regulating circuit between the hypothalamus, pituitary and thyroid.

Thyroxine - Free (FT4)

Test Name	Observed Values	Units	Biological Reference Intervals
* FREE T4	1.10	ng/dL	0.5 - 1.4

Method:CLIA

INTERPRETATION::**The T4 hormone comes in two forms:**

Bound T4, which attaches to protein Free T4, which does not attach to anything If the results show high high free T4 levels, it is called as hyperthyroidism. Low Free T4 levels is called as hypothyroidism, a condition in which the body doesn't make enough thyroid hormone. FT4 test results are often compared with T3 and TSH test results to help diagnose thyroid disease.
